OFF-THE-SHELF SMART PDUs

STV-4503K/C

Server Technology PRO2 Switched PDU, C13x24, C19x6, 3phase 230/400V 32A

The Server Technology PRO2 Switched PDU provides control of outlet power and local LED input current monitoring, allowing IT personnel to determine safe levels of loading on a per-phase basis while installing equipment into the rack/cabinet. The integral PIPS® technology provides billinggrade accurate measurement of current, voltage, active power, apparent power, power factor, crest factor, and accumulated energy at the input. These power data points, along with temperature and humidity measurements (provided via optional probes), are accessible through the built-in Web and CLI interfaces as well as through SNMP.

The PRO2 Switched "Primary" PDU can be connected to as many as three (with optional module) PRO2 Switched "Link" PDUs to extend the network access to the redundant or secondary power feed without the risks of a daisy chain linking configuration.
